

**CHARNWOOD**

**STOVE POD**

*An instant freestanding stove chamber  
& hearth plate that is quick and easy to  
install.*

The Charnwood Stove Pod is designed for cabins, yurts, tents, boats, home offices and other tiny home accommodation. Compatible with the highly efficient Charnwood Aire 3, this neat steel enclosure creates a safe, protected focal point for the room. It is available in a matt black powder coat with the option to add a VLAZE vitreous enamel liner for a stylish, easy to clean finish.

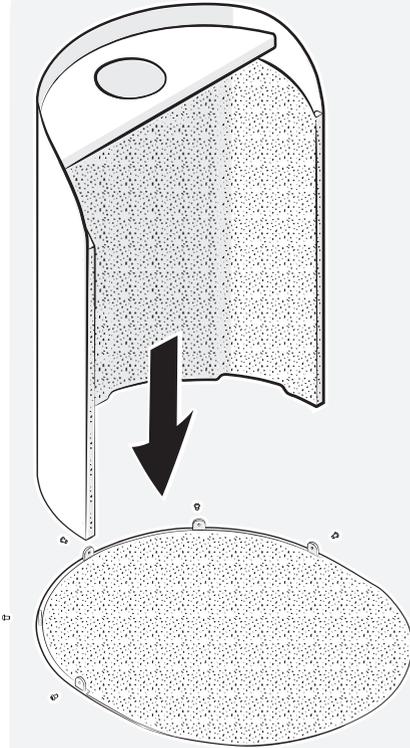

For further specifications visit

# ASSEMBLY

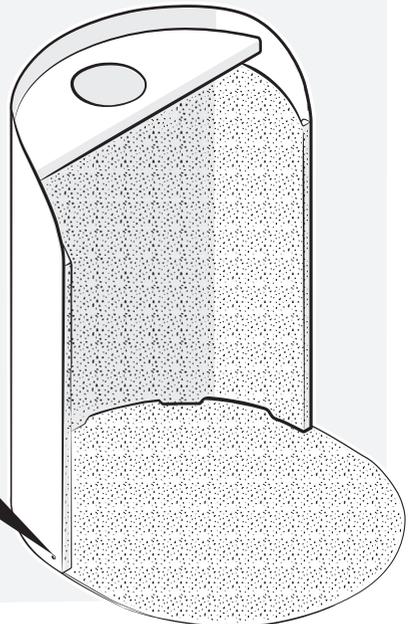

REQUIRED:

The stove pod arrives fixed to the pallet and will need to be unscrewed using an allen key. Once free from the pallet, assemble the stove pod by lifting the back onto the base.

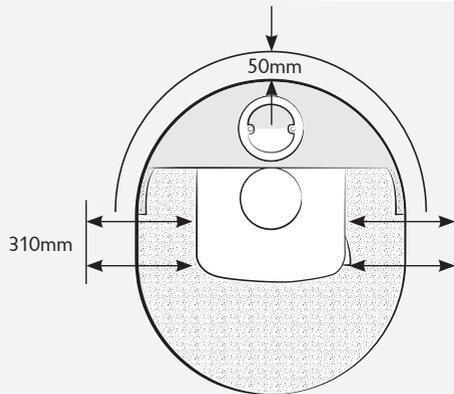

Secure with the five hex head screws through the slots in the back into the attachment lugs on the base using the allen key.

# INSTALLATION

For full installation, the Aire 3 operating and installation instructions that are supplied with the stove must be adhered to.

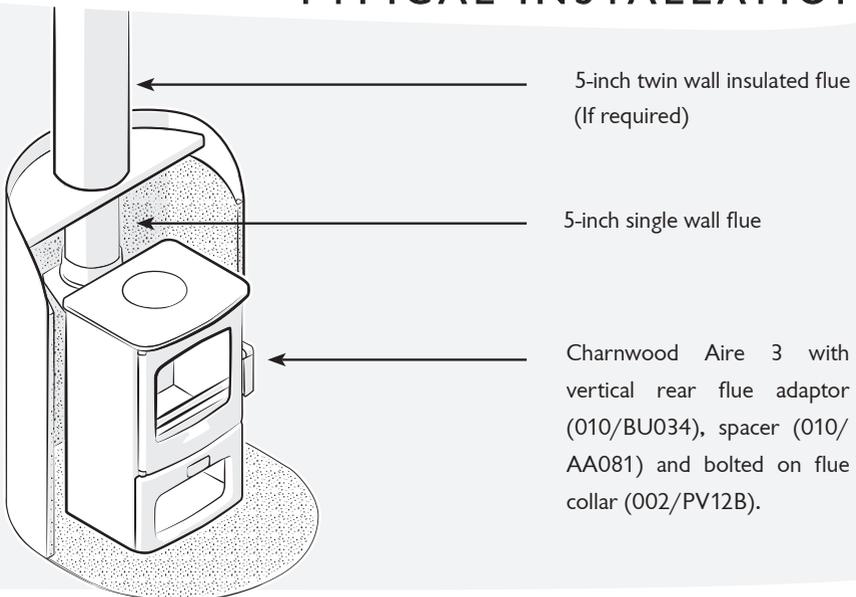

The curved back of the stove pod must be positioned 50mm away from combustible material.

The unshielded sides of the Aire 3 must be positioned a minimum of 310mm from combustible material in accordance with the Installation manual supplied with the Aire 3. The stove pod base allows the stove pod with the Aire 3 on it to be placed on any hard / flat surface and does not require an additional hearth underneath it.

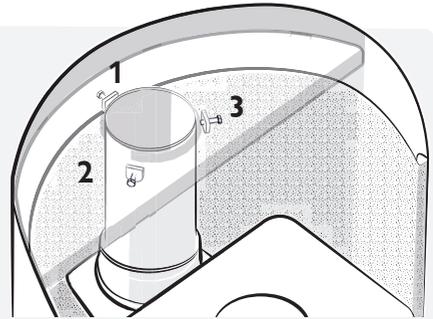

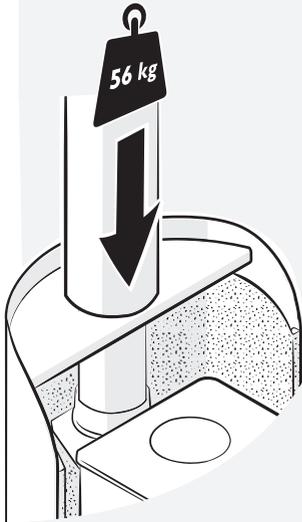

Care should be taken when positioning the Aire 3 onto the base to avoid marking the stove pod surface.

## TYPICAL INSTALLATION

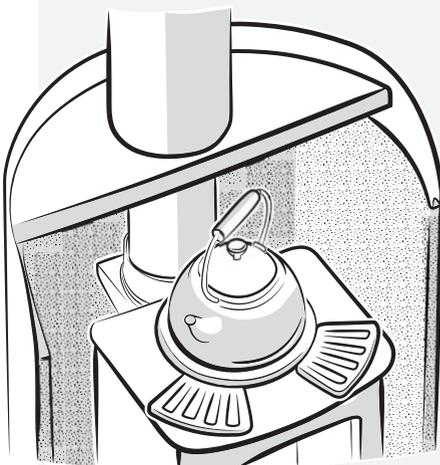

# INSTALLATION

The three bolts underneath the shelf can be adjusted to centralise the flue pipe.

If required for installation, the stove pod shelf can bear a static load of up to 56kg

## COOKING PLATE

The optional kit (part no 010/AP150S) comprises of a cast iron cooking plate and four trivets and is installed directly into the top outlet of the Aire 3. When fitted, only 2 trivets can be used at a time.

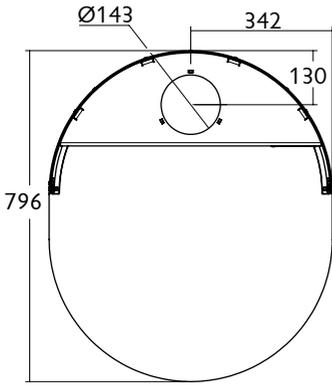

For further instructions on how to install the cooking plate see sheet REF. TIS136. which is supplied with the cooking plate kit.

# SAFETY

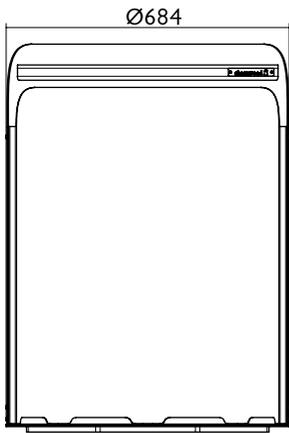

Installing a Charnwood stove with a Stove Pod into a tent, cabin, tiny home or other compact space is a great idea and can transform the area into a cosy living and working zone. It's really important to keep safe, so please bear these important safety points in mind when preparing the installation.

- Make sure that all combustible materials are kept a safe distance away from the stove and the flue – follow the flue manufacturers guidelines for safe distances, see these instructions for distances from the Stove Pod and Charnwood Aire 3.
- Make sure that the flue is well supported and will withstand the effects of the wind. Guy wires or similar supports will be necessary in some cases.
- Make sure that the flue terminal is high enough above the roof line to give sufficient draw and to take hot flue gases safely away.
- A spark guard on the top of the flue is advisable when fitting the stove to a tent, yurt or similar.
- Make sure the end user is aware of how to use the Stove Pod safely.
